\*\*\*This calendar serves as a general guide and practices may vary depending on environmental conditions\*\*\*

Winter	Son growth calendar  Spring				Summer				Fall			
					Root growth			深	条件条		、大きろそん	
	January	February	March	April	May	June	July	August	September	October	November	December
Establishment				The best	time to establish w	arm-season grass is	during active growt	h periods.				
Mowing	winter annua	sary, to prevent al weeds from ering.	Mow at 2	Mow at 2 to 4" weekly, or as frequently as necessary to prevent scalping. Never remove more than 1/3 of the leaf tissue at one time.							Mow, if necessary, to prevent winter annual weeds from flowering.	
Fertilization	Make the fi application w is actively growi mowed at lea			hen the lawn ng and has been	n the lawn and has been  Do not apply fertilizer to a stressed grass						Depending on the part of the state, fertilizer may be continued to be applied. Make the last application of nitrogen 4 to 6 weeks before the first historic frost.	
Aerification			Aerate to relieve soil compaction, especially in new lawns with limited organic matter or in lawns that are moderately or heavily used. Aeration is best performed when there is adequate soil moisture.									
Thatch removal			Remove problematic thatch using hollow-tine aerification, a vertical mower, or a power rake.  Thatch at 0.5 to 1" depth can begin to impede water infiltration and harbor disease and insects.									
Weed Control	temperatures consecutive days	emergence herbicid reach approximatel for the prevention (i.e., crabgrass, goos	y 55°F for 4 to 5 of summer annual		Apply post-emergence herbicides as needed for summer annual and perennial weeds. <sup>1</sup>				Apply pre-emergence herbicides when soil temperatures reach approximately 70F for 4 to 5 consecutive days for the prevention of select winter annual weeds (i.e., annual bluegrass, henbit, rescuegrass).		Apply post-emergence herbicides as needed for the control of winter annual and perennial weeds.	
Irrigation		on during winter turfgrass is not growing.	Complete the "Water-Wise Checklist" before turning irrigation on for the spring and summer.		Irrigate only when necessary to prevent wilting or to replace at least 60% of during rainy periods or early spring and late fall when natural rainfall is mo				f evapotranspiration. Do not irrigate		Turn off irrigation during winter months when turfgrass is not actively growing.	
Insect Control							ative white grub if necessary.	for w	irative or rescue institute grubs, if neces out for fall armywor	ssary.		
							Scout for chinch b	ugs and apply insect	ticide, if necessary.			
Disease Control						Scout for take-all root rot and gray leaf spot.						
									fungic large (Rhizo areas diseas when s	ly preventative cide products for e patch disease octonia solani) in with a history of se development soil temperatures etween 50-70°F.
